

Skåne-möllan AB

Skåne-möllan is updating the product information.

We take the opportunity to update our values according to the National Food Administration regulations (LIVSFS 2009:6). This means that the protein level of all our products is now calculated with the factor 6.25. Previously Skåne-möllan used 5.7.

The new product data sheets also include sugar, saturated fat and sodium content. Energy values increase slightly because of dietary fiber is now also providing an energy supplement.

We now also show in the data sheets how the product looks like from the following parameters:

Microbiology
Pesticide
Allergens
Heavy metals
GM

A risk assessment on the shelf life for all our products have been made, which means that it has changed for some products.

The aim has been that the product data sheet must be clear and informative but not include more than one A4 page.

Is anything unclear or you find anything wrong - do not hesitate to contact us!
Would you like to receive the new updated product data sheets please contact us at kvarn@skane-mollan.se and we will send it as a PDF file.
