Skåne-möllan's Environmental Policy

At Skåne-möllan there is a high level of environmental awareness. This is made visible with this policy.

- Skåne-möllan must purchase raw materials that enables Skåne-möllan to market as natural products as possible.
- Skåne-möllan will primarily buy grain from farmers in the local area. This reduces the number of transports and minimizes the environmental impact.
- In our effort to use renewable and thus climate-smart energy, Skåne-möllan has initiated a collaboration with the local wind power company Mimervind. Mimervind operates several wind turbines, e.g. in Svalöv. At one of these plants, located about 10 km southeast of Tågarp, Skåne-möllan buys the entire annual need for electricity for a total of about 8,000,000 kWh. Skåne-möllan buys guarantees of origin for electricity that are connected to this specific wind turbine, Hällstorp no. 1, which guarantees our use of green electricity.
- Biogas is used for our steam boilers, this means that we use 100% renewable energy.
- Skåne-möllan will actively work to reduce energy and material consumption as well as transport at our facilities. This is to reduce our impact on air, land and water. Skåne-möllan currently uses electricity and gas as an energy source, and to use these forms of energy efficiently, continuous improvement is done. We conduct annual energy audits with thermal photography of our electrical units. Our ambition is also to continuously seek new energy-efficient technology for grain processing. An example of this is our MWT technology, which reduces energy consumption when producing, for example, oatmeal.
- Skåne-möllan's deliveries of flour and other grain-based products in bulk take place with modern trucks that meet a high environmental class. Deliveries of our products in bags is made through efficient transports and, as far as possible, through joint deliveries to our customers.
- Skåne-möllan will have a selection of Organic Products in our product range.
- Skåne-möllan will work preventively by maintaining our vehicles, machines and equipment in a good and environmentally conscious way.
- Skåne-möllan must comply with applicable legislation, ordinances, regulations and other requirements that apply to us as a high-class food company.
- Skåne-möllan must take its surroundings into account.
- Skåne-möllan will encourage staff to think environmentally consciously and to sort our waste.

- At Skåne-möllan, we sort paper, corrugated cardboard and plastic from production. Iron and steel from conversion/extension projects are recycled continuously. In the staff canteen and in the office, we sort glass, paper, cardboard and metal.
- Products are partly packed on plastic pallets from Svenska Retursystem. The demand for plastic pallets from our customers is constantly increasing.
- Skåne-möllan must always at least live up to national laws and regulations.
- Water consumption must not be unnecessarily high. For our part it means, among other things that we do not moisten the grain to an unnecessarily high-water content.
- We are connected to FTI.
- At Skåne-möllan, we must manage resources and show good environmental consideration in both words and deeds. The reason is simple: We have not inherited the earth, we borrow it from our children!

Anders Persson, CEO
